

- **interACT** helps in creating a platform inside the organization for creating meaningful and Interactive Moderated Meeting Sessions in a structured manner.
- The product is built with the concept of creating multiple Guest and Moderators who can moderate and answer questions and comments from various users in the organization on a particular topic.
- Works with all computers that have Internet access. A browser is all that is required to join the session and actively participate.
- There is no need to download, install, or configure anything.
- Supports multiple Guests, multiple Moderators for each session and allow multiple sessions to be carried out simultaneously.
- **interACT** has the capabilities to allow questions to be moderated by multiple moderators and answered by multiple guests.
- Guests and moderators will get a transcript of the entire conversation via email. The same could be then shared with the other members in the organization.
- Sessions can be scheduled by administrators and session creators. The session can be extended at the discretion of the moderator.

- **interACT** is a user Friendly, data-rich, innovative Application with live help links, provides a platform for a structured discussion on a real-time interaction network.
- **interACT** supports Various Users with Multiple Guests and Moderators, invitation for a Session can be sent out by guests or moderators, Users receive notification via emails and join the session and pose multiple questions. Sessions, users are practically unlimited.
- Moderators approve or disapprove questions before posting to the Guest. Moderators direct relevant question to appropriate Guests and avoid overflow of the queue of questions. Instant comprehensive report of the approved, disapproved, answered and unanswered questions is made available to users. Users get Transcript of the entire conversation via email.
- The Session Summary is available to all the participants for future reference and helps create an effective organizational communication tool.
